Topic Outline

- 1 Introduction
- 2 Project Overview
- 3 Preliminary Action

- 4 Proposed Solution
- 5 Next Steps and Timeline

PROJECT OVERVIEW

► Objective

- Develop a comprehensive, dynamic website for DGRS Techno Pack
- Enhance the company's online presence
- Streamline customer interactions
- Facilitate the management of orders and inventory

► Project Statement

- DGRS Techno Pack lacks a digital platform to efficiently manage and showcase their wide range of products and services
- The company needs a solution to address this issue

RELEVANCE

- Fill the existing gap in the competitive field of corrugated packaging
- Offer an online platform to improve customer engagement and operational efficiency
- Align with the company's mission to provide top-notch service and quality

PRELIMINARY RESEARCH

★ Background:

- We reviewed existing websites of competitors and related industries to identify best practices and potential improvements.
- Key findings include the need for an intuitive interface, seamless navigation, and comprehensive product information.

★ Target Audience:

- The primary users of the website will be existing and potential customers, including businesses requiring customized packaging solutions.
- The website will address their needs by offering detailed product specifications, easy order placements, and real-time support.

PROPOSED SOLUTION

Key Features:

- **Interactive Product Catalog:** Detailed descriptions, images, and specifications for each product.
- **Online Ordering System:** Streamlined process for placing and tracking orders.
- **Customer Portal:** Secure access for customers to view order history, invoices, and shipment tracking.
- **Live Chat Support:** Real-time assistance for customer inquiries.
- **News and Updates:** Latest information about the company and industry trends.
- **Multilingual Support:** Catering to a diverse client base.

A stylized illustration of a red car on a road. The car is red with a yellow window and a blue wheel. It is positioned on a dark grey road with white dashed lines. In the background, there is a yellow sky with a white cloud and a black bird flying. The car is parked on a brown curb next to a yellow wall with two vertical white lines.

Technology

Technology Stack:

- **Front-End:** HTML, CSS, JavaScript, React.js
- **Back-End:** Node.js, Express.js, Java/.Net
- **Database:** MongoDB, MySQL
- **Tools & Platforms:** Git for version control, Netlify(other available hosting domain) for deployment, and Stripe for payment processing.

NEXT STEPS AND TIMELINE

Initial Step

1. Research & Planning (1 weeks):

Detailed project planning, requirement gathering, and initial design mockups.

2. Design & Development (3 weeks):

- Front-End Development (1 weeks): Creating the user interface and user experience design.
- Back-End Development (2 weeks): Setting up the server, database, and integrating the back-end functionalities.

3. Testing (1 weeks):

Conducting thorough testing for functionality, usability, and performance.

4. Deployment & Launch (1 week):

Final deployment on the chosen platform and launch of the website.

5. Post-Launch Support (Ongoing):

Continuous monitoring, maintenance, and updates based on user feedback.
